Using MoneySmart to address language, literacy, numeracy and digital literacy in an integrated approach

- Students learn vocabulary in context related to their everyday life
- Numerical terms and mathematical operations identified

Fortnightly / weekly / annually

- One Week $\times$ 4 = 1 month
- One fortnight $\times$ 2 = 1 month
- One quarter $\div$ 3 = 1 month
- Annual $\div$ 12 = 1 month

Students work on a case study. Each group identifies the income and the categorized expenses for the family. To bring in mathematical operations, all income and expenses are converted to monthly.

Each group shares their information with other groups by communicating the mathematical operations orally.

Students independently navigate the MoneySmart website and use the budget planner.
